

DECOMMISSIONING

Asset Recovery Expert

FIRST CASE

Ashley Jackson

VP Asset Management Solutions | Mazree

First Case Asset Recovery Expert™:

Asset Redeployment

Ashley Jackson | VP Asset Management Solutions @ Mazree

First things first, let's talk about the elephant in the room (or the CT scanner in the corner). It's outdated, and it's just taking up valuable space. But just like getting rid of that old couch you've had since college, it's time to let go and make room for something new and exciting.

But before you start hauling equipment out to the curb, there are a few things you need to consider. For starters, you can't just leave your old equipment out in the rain and hope for the best. No, no, no. You need to make sure that all patient and facility data is properly erased and the equipment is disposed of in accordance with federal and state regulations. In some cases, this might include deinstallation. And let's not forget about all those hazardous materials, like lead and mercury. You don't want to be the one responsible for contaminating the local water supply, do you?

Decommissioning is clearly more than just getting rid of old equipment. It is a multi-step process that requires careful planning and execution to ensure the safety, compliance of the equipment, as well as the protection of patient and facility data.

A very important step in decommissioning is the removal of any personal or sensitive information stored on the equipment. This includes patient records, financial information, and other confidential data. Proper data sanitization and destruction methods must be used to ensure that all data is completely erased and cannot be recovered. In other words, this medical equipment must be evaluated for potential reuse or resale.

Mazree can assist in the proper deinstallation, decommissioning and resale of medical equipment. Decommissioning not only frees up valuable space and resources, but also ensures the safety and compliance of equipment and the protection of patient and facility data.

Asset Recovery Expert Series™ Biography:

Ashley Jackson

VP of Asset Management Solutions

mazree

Ashley Jackson is the VP of Asset Management Solutions at Mazree. With several years of experience at Memorial Sloan Kettering Cancer Center as a Biomedical Engineering Manager, Ashley is a foremost expert in Asset Management. She now oversees the development and implementation of Mazree's innovative and advanced Lifecycle Management CMMS product set to launch in 2023.

Ashley is passionate about implementing technology-driven solutions to optimize operations in the hospital. She strives to find new and innovative ways to enhance patient care by focusing on delivering key outcomes, building amazing collaborative teams, and quickly adapting to feedback from stakeholders. Over the years, Ashley's ability to develop, scale, and optimize solutions has garnered recognition and made tangible differences. Ashley is a supporting author for the book *Leveraging Technology as a Response to the COVID Pandemic*, which is available now on Amazon. Additionally, Ashley was awarded The Robbins Family Award for Excellence in Collaboration for her work in the onset of the Covid-19 pandemic.

Now, she is taking the lessons learned from the hospital setting to her new role at Mazree by helping create software which will greatly improve the hospital's ability to effectively manage the full lifecycle of their medical equipment.

When she is not working, Ashley is an avid musician and loves spending her time singing or playing the piano/guitar.
